TITLE: TRANSMISSION DEVICE AND APPLICATION TO A METERING DEVICE

Preliminary Amendment: ABSTRACT AMENDMENTS

On page 17, please amend the paragraph as follows:

The ~~invention concerns~~ a transmission device for transforming at least an oscillating motion into a rotational one-way linear movement ~~comprising~~: includes an actuator (1) oscillating about an axis of oscillation, between two positions, in a first so-called driving direction (3), and in a second so-called reverse direction, opposite ~~said the~~ driving direction (3); a wheel (4) provided with an axis of rotation, the axis of oscillation of ~~said the~~ actuator (1) and the axis of rotation of ~~said the~~ wheel (4) merging; ~~means for a~~ butt driving (6) ~~said device for the~~ wheel (4), secured to ~~said the~~ actuator, capable of driving ~~said the~~ wheel (4) in a first so-called forward direction (7); ~~means for and a~~ butt locking (6) ~~said device for the~~ wheel (4), capable of preventing ~~said the~~ wheel (4) from rotating. ~~The invention also concerns a~~ A device dispensing dispenses controlled doses of a liquid, pasty or viscous substance, in particular a sealing product, using such a transmission device.
